2. Signs and Markers

New mine identification signs have been ordered for the main facility and the 4th East portal area. The signs still need to be installed. It was observed on the prior inspection that one of the signs that was present at the 4th East portal area was missing. The new signs at each location will eliminate dual signs at both locations that provided different pieces of information in an effort to provide all of the required information.

4.b Hydrologic Balance: Sediment Ponds and Impoundments

The newly placed rip rap on the pond inlet adjacent to the county road leading to the 4th east portal area has been pushed and eroded into the interior of the pond. The pond was identified on the certified inspection as needing rip rap. Material was in place on the prior inspection, but has failed from recent storm activity. Maintenance repair work is needed and the design should be evaluated to provide a non erodible inlet.

8. Noncoal Waste

Minor amounts of noncoal waste was observed floating on top of the water in the sediment pond located at the 4th East portal area. When the water dissipates the waste needs to be gather and disposed of properly.
